If you are looking for a new challenge and want to join the ranks of a world class international brokerage, we would love to hear from you.

Position: Data Engineer   **Department: IT**

Duties & Responsibilities

The Senior Data Engineer will be working within our Data Integration Team, on projects involving real-time data streaming from databases/applications, designing and implementing the DWH and identifying the ETL processes and mappings between the various systems composing our application ecosystem.

- Expertise in Database technologies, good knowledge of SQL and experience developing across both Relational and NoSQL.
- Expertise in message queues such as RabbitMQ, MQTT and distributed streaming platforms such as Apache Kafka.
- Hands on experience in Data Warehouse (DWH) environment with data integration/ETL of large and complex data sets.
- Hands-on coding experience in Java and Python.
- Data modeling skills and schema design for DWH.
- Understanding of performance tuning and scaling.
- Familiarity with Business Intelligence (BI) and Visualization platforms such as Tableau.
- Ability to communicate effectively in English.

Qualifications

- Bachelor's degree in Computer Science or related field (with industry experience).
- Proven experience in streaming ETL and distributed streaming using Apache Kafka/KSQL.
- 6+ years of building large scale data-processing systems with 4+ years in Big Data technologies such as Hadoop and Spark.
- Knowledge of the ELK stack (Elastic, Logstash, Kibana) is desirable.
- Understanding of data analysis and machine learning models is desirable.
- Experience in the Financial Services industry is desirable.
